Clinical sign/presenting complaint: Pruritic Dermatitis

Pruritus

- Review distribution of lesions (face, feet, perianal = atopy or food allergy; lower lumbar = flea allergy; contact area = contact allergy)
- Perform diagnostics for dermatologic conditions (e.g., Sarcoptes ELISA and/or skin scraping/cytology, Ringworm Real PCR, fungal culture, parasite identification)
- Review flea control

Perform CBC, chemistry, urinalysis, endocrine testing

Pruritus remains

Seasonal

- Investigate flea allergy dermatitis, insect hypersensitivity and/or atopic dermatitis

Nonseasonal

- Investigate food sensitivity/allergy and/or atopic dermatitis
  - Food trials
  - Pruritus remains

Atopy diagnosed

Aller-g-detect™ Allergen Preliminary Panel

Perform when dermatology referral or regional serum allergy panel are declined

Positive

- Allergen-specific serum IgE panel
  - Positive
    - GREER® Aller-g-complete immunotherapy available in shots or drops and/or other treatments for lifetime management of allergies.
  - Negative
    - Dermatology referral or additional diagnostics (e.g., biopsy, review initial diagnostic work-up)

Negative

- Dermatology referral, standard regional or additional diagnostics (e.g., biopsy, review initial diagnostic work-up)
